

## RESIN CAPSULES &amp; ACCESSORIES

# ENCAPSULATION MEASURING DEVICE

## Features

- The graduations on the measuring tape face the user, assisting in measuring encapsulation of resin anchored roof/rib bolts
- Due to special treatment of the refined steel the tape unrolls on its own when the trigger is pressed
- Stainless refined steel tape, white enamelled
- Totally waterproof
- Unbreakable and durable
- Easily carried in pocket
- Measurement length 2000mm in 1mm increments

## Technical Details

The Encapsulation Measuring Device unrolls away from the user when the trigger is pressed.

Now there is an alternative to cutting the end off conventional tape measures in order to measure encapsulation of resin grouted bolts.

The end of the tape reads zero, leading to more reliable encapsulation readings. Additionally, the graduations of the measuring tape are on the convex side of the tape which makes taking encapsulation readings easier to achieve.
